

Vanguard Instruments Company, Inc.

ATO-400/400P/600/600P Line

The Vanguard ATO micro-ohmmeter product line is specifically designed for sub-station applications to measure EHV circuit-breaker contact resistances, bushing contact joints, or any low resistance. These microprocessor-controlled micro-ohmmeters can accurately measure resistances ranging from 1 micro-ohm to 300 milliohms. The ATO-400/400P outputs an un-filtered direct current from 10A to 400A while the ATO-600/600P outputs an un-filtered direct current from 10A to 600A. The ATO-400P and ATO-600P feature a built-in 2.5" wide thermal printer for printing test reports in the field.

The ATO product line has been in production since 2006, and over 100 units have been sold world-wide.
